

focus and debates on a fluid and sustainable future

September 24th-27th 2009

Palazzo Badoer, Sestiere San Polo 2468, Venice

MISSION

blue in architecture 09 is an international symposium focused on water. It aims at furthering the knowledge of urban, economic, environmental and technological sustainability in project design, with the goal of enhancing quality standards in planning and design processes.

blue in architecture 09 intends to promote opportunities for interdisciplinary collaboration, by enabling communication between experts, researchers, practitioners, administrations and public agencies, private companies, designers, infrastructure and service network managers, and public, private or cooperative entities involved in the planning, carrying out and management of architectural and urban projects.

blue in architecture 09 was conceived to broaden the awareness of and to support projects dealing with urban transformation, technological innovation, and synergetic development between energy and the environment. It intends to focus on issues that are now of primary importance in urban transformation and local development processes.

SYMPOSIUM PROGRAM

blue in architecture 09 is a three-day program focused on five topics:

- topic one, Climate, water energy and cities
- topic two, Climate change and flood strategies
- topic three, Architecture in a no-water world
- topic four, Liquid ethics
- topic five, Amphibian architecture
